

## Client Description

A world leader in teaching, research and public engagement, University of Illinois is one of the leading Universities in the world. With 3 campuses located in Urbana Champagne, Chicago and Springfield, the university boasts over forty thousand students and hosts 150 undergraduate and graduate programs.

## Project Description

The University of Illinois approached Red2 to provide a means of streamlining the process of resource allocation and sharing. The development enables departments to work together and collaborate in finding the optimum use of available skills. In other

words, the University departments are able to maximize employee skills and resources in between departments. The system is suitable for all enterprise level businesses and is both cost effective and low friction.

This implementation of Red2 Auction demonstrates how the Red2 Auction product can be customized to meet the differing needs of clients using our standard framework.

## Benefits

- Single sign on functionality provided by EAS
- Full customization to adjust to current client system
- Maximization of resources and talent between departments
- Ability to augment the single sign on process with additional data, namely social management of roles
- Extension of the auction product to support resource based requirements
- Creation of a specific inter-departmental billing and offer / tender model
- Scale to support 40,000 potential users
- Creation of a customized front-end and management system which conforms to the branding and accessibility guidelines of the University Of Illinois
